

Site Audit: Detailed Issue: Invalid structured data items

themegaradio.com

Invalid structured data items

Project name: Tr

Detailed Issue Description

About this issue:

This issue is triggered if structured data items contain fields that do not meet [Google's guidelines](#).

Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results.

If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings.

For more information on the structured data requirements, see [schema.org](#), [Google documentation](#), or [our article](#).

How to fix:

Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results.

We recommend that you use the [Rich Results Test](#) tool to review and validate your pages' structured data against their rich snippet requirements.

Only the first 100 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.
